SUMIT CHAVDA

Software Engineer | Full-Stack (Next.js, Node.js, MongoDB)

Mumbai, India | +91 98922 60330 | sumitchavda3003@gmail.com | linkedin.com/in/sumitchavda03 | github.com/smartysumit

SUMMARY

Full-stack Software Engineer (Next.js, Node.js, TypeScript, MongoDB) who owns a production headless e-commerce platform serving 800K monthly sessions (25K daily), from architecture through release and production support. Delivered 150+ production features, 10+ system integrations (ERP, payments, CRM, analytics) and GCP/BigQuery data pipelines that drive customer engagement. Built SellRank, a multi-tenant SaaS app live on the Shopify App Store, covered by 78,240+ automated test cases. IEEE-published researcher (GANs); B.Tech Computer Engineering (AI/ML), CGPI 9.6/10.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, C++, Liquid
Frontend: Next.js (App Router, SSR/ISR), React, Remix, React Native (Expo), Tailwind CSS, Polaris, Core Web Vitals optimization
Backend: Node.js, REST API design, GraphQL, Webhooks, Authentication, MongoDB, PostgreSQL, Prisma
Data & Analytics: BigQuery, SQL, ETL and data pipelines, GA4, GTM, Google Ads conversion tracking, WebEngage, Looker Studio, Power BI
Cloud & DevOps: Google Cloud Platform (Cloud Functions, BigQuery), AWS, Vercel, Git/GitHub, CI/CD, automated testing, Agile delivery (Linear)
Commerce & Integrations: Shopify (Admin GraphQL, Storefront API, Metaobjects), headless commerce, Razorpay, ERP integration, Zoho CRM

PROFESSIONAL EXPERIENCE

Lucira Jewelry (lucirajewelry.com) **Mumbai, India**
Software Engineer *Sep 2025 - Present*

- **Platform ownership:** Lead engineer for Lucira's headless commerce platform (Next.js, Shopify Storefront API, MongoDB), migrated from a themed Shopify store and now serving 800K monthly sessions (25K daily); own architecture, releases and production support, delivering in monthly sprints planned in Linear with a business analyst, consistently on or ahead of schedule.
- **Infrastructure and cost:** Replaced a single AWS deployment that failed under peak load with a split stack, Vercel (frontend) and Hostinger (backend), cutting monthly infrastructure cost 33% (INR 45K to INR 30K) with no capacity incidents since.
- **Performance and conversion:** Cut Largest Contentful Paint by 55% (28.0s to 12.7s) through image optimization, code splitting and render-path work; shipped and measured CRO changes (social-proof badges, above-the-fold offers, paginated reviews, rage-click fixes).
- **Programmatic SEO:** Built a metaobject-driven system generating 900+ live gold, silver and platinum rate pages across 300+ Indian cities over one shared rate-update path; preserved legacy URLs through the migration so organic search equity was retained.
- **Payments and ERP integration:** Delivered a 9+1 month instalment savings product end to end on Razorpay with ERP-backed enrollment, instalment tracking and receipt reconciliation; consolidated it from a standalone subdomain into the main domain, retiring one codebase and hosting stack; fixed a silent payment failure for customers without an ERP record.
- **Data pipelines:** Modeled and joined source tables in BigQuery and exposed the payload through a Python REST API that triggers WebEngage customer notifications; routed store leads from GCP Cloud Functions into Zoho CRM.
- **Analytics engineering:** Designed and maintain 50+ GA4/GTM dataLayer events across search, PDP, cart, checkout, payments and account funnels; configured Google Ads conversion tracking and order-level UTM pass-through so revenue attributes to campaign.
- **Internal tooling:** Built MongoDB-backed admin dashboards so marketing and ops self-serve rates, offers and site content without engineering tickets.
- **Merchandising and features:** Built a collection-ranking engine (weighted scoring over views, carts, orders, revenue and stock) written into Shopify's native sort, later productised as SellRank; shipped a nearest-store pincode journey, faceted PLP filters and a self-serve returns flow.

LeelaRam Technologies (leelaramtechnologies.com) **Mumbai, India**
Founder & Software Engineer *Jan 2026 - Present*

- Run a product-led software company; built and maintain 5+ production web and commerce platforms across jewelry, retail and construction for domestic and international clients, from requirements through post-launch support.
- **SellRank (Shopify app; live on the Shopify App Store, Oct 2026):** Multi-tenant embedded app on Remix, TypeScript, Shopify Admin GraphQL API, Prisma and PostgreSQL that ranks any collection by 19 measures or a weighted score; scheduled re-sorts, drafts with auto-revert, session-token auth, HMAC-verified webhooks and Shopify billing; verified by 78,240+ automated test cases and a live-store audit.
- **Client delivery:** PrimeStyle (US jewelry brand): leading redevelopment of a production Shopify storefront (customization, recommendations, analytics, performance) with international stakeholders; Chamunda Constructions: Next.js lead-generation site with prerendered, indexable pages.

Blazetrail Fintech Solutions **Mumbai, India**
Software Development Engineer Intern *Feb 2025 - Apr 2025*

- Built a virtual trading platform (simulated trade execution, portfolio updates, transaction handling, error recovery) integrated with backend APIs and authentication; delivered features within sprint timelines.

RESEARCH & PROJECTS

- **SAR-to-Optical Image Translation using GANs (IEEE IGARSS 2025, Brisbane):** Trained a GAN to translate radar imagery into optical satellite imagery, improving interpretability of weather-independent data; co-authored, presented and published on IEEE Xplore.

EDUCATION & CERTIFICATIONS

K J Somaiya Institute of Technology | B.Tech, Computer Engineering (AI & ML) | CGPI 9.6/10 | Joint Treasurer, IET 2021 - 2025
Certifications: AWS Academy Cloud Foundations, EC-Council Ethical Hacking Essentials, Google Analytics, Power BI
